

It saddens me that young men and woman are dying as we speak to free a country from the very things we as a nation take for granted . freedom of information being one of them. This bill before the house ,Bill HR4206. to limit satellite broadcasters from informing us of weather and traffic info is absurd. I have been a trucker for the past 20 years . The best thing that has happened recently is the introduction of satellite radio. Just the fact that I can be 3 states away from severe weather and getting up to the minute information on that weather or traffic situations is worth the price of subscription. Being out here on the road making a living is hard enough. Please dont make it any harder by limiting my ability to obtain information, and making safe and sound decisions based on that information. I feel its time that common sense plays a role in decision making when it comes to laws in this country lets start with this one.

Thank you for your time and concideration on this matter.
